

Dear Sir,

I have seen this app very carefully, according to my thoughts, vision and experience regarding features enhancement of your app. As I watched many Netflix documentary based of UI/UX design and feature enhancement using AI and Data Science technologies for example Abstract , Future of and many others which are must to watch to know things clearly.

# What I see? :

First of all I am going to explain that what I feel when open to this app, it is looking simple just like other app is looking already not much new. Its UI/UX design is also not looking that much good it is also simple. This app is not much new for me. I'm saying this because I have already used many apps which are also provide these kind of content.

# What I suggest? :

1.You need to improve the quality of sound which is present in the lectures of different courses because best quality of sound and best video quality is must to get the attention of more learners. It can create good trust on the content.

2.Use animated dynamic view, which can make it more attractive and to increase this you can use different tricks and technique of UI/UX, AI and Data Science. It can make it more attractive and interactive, also remove the boredom during the lectures.

3.In this app you can also provide a competitive platform where they can apply their knowledge of different courses and make it more stimulated and animated by this we can also getting the data related to their interest and their thoughts of unique methods in a very different way, which is not present in any other app of these kind. Also rewarding the people is very different way by knowing their interest using data science and AI.

I think that is enough according to my task because more unwanted features are also not good for any kind of app.

Thank You,

Shivam Tyagi
